

Unicel Architectural publishes Vision Control® videos to highlight integrated louver functionality and capabilities

MONTREAL, Canada – December 15, 2015 – Unicel Architectural, the leading manufacturer of vision and daylight control solutions, today announced that it has published on YouTube English and French language videos of its market-leading Vision Control® integrated, cord-free louvers in action. Vision Control® is a patented, hermetically-sealed insulating glass unit (IGU) combining louvers within glass for both interior and exterior glazing applications.

“When we speak to architects and designers about our vision and daylight control product, they want to see how it works,” said Jean-Francois Couturier, CEO of Unicel Architectural. “So we created Vision Control® informational videos to better showcase the product and its capabilities with one easy click. Since Vision Control® is unique in the market, and so much more powerful than static IGUs, the dynamic operability of its louvered glazing system is better appreciated by viewing it in action, seeing its ease of installation, and understanding its various applications and control mechanisms.”

Vision Control® advanced louvered glazing technology eliminates strings and cords, ensures alignment, requires no maintenance and provides the ideal daylighting or privacy solution for commercial, residential, educational, healthcare or institutional environments. When installed in exterior applications, Vision Control® significantly reduces energy consumption in support of LEED® requirements. Vision Control® is a winner of The Architects' Choice Award from the National Symposium on Healthcare Design and a Product Innovation Award from Architectural Products Magazine.
